EDUCATION

Indiana University

Master of Science, Computer Science

Relevant Coursework: Algorithm Design and Analysis, Advanced Data Base,

Indianapolis, U.S

May 2026

SKILLS

- **Frontend & UI/UX:** HTML5, CSS3, JavaScript, TypeScript, Angular, React, jQuery, Blazor, WPF
- **Backend & APIs:** C#, ASP.Net Core, ASP.NET MVC, ASP.NET Web API, Blazor, Entity Framework, JWT, LINQ, JWT Token Authentication & Authorization, Dependency Injection, async/await, Semantic Kernel, REST APIs
- **Databases:** SQL Server, PostgreSQL, MySQL, Oracle DB, SQLite, Mongo DB, NoSQL
- **Tools & Practices:** Git, VS Code, Postman, CQRS, Domain-Driven Design, microservices, event-driven architecture
- **Cloud & DevOps:** Azure (Functions, Service Bus, Event Grid, DevOps, CI/CD), Docker, Terraform, Jenkins, Argo CD

PROFESSIONAL EXPERIENCE

SuperQuickQuestion | Software Engineer

May 2025 – Present, Indianapolis, IN

- Developed and maintained backend microservices using .NET Core and C#, applying CQRS pattern and Domain-Driven Design to support scalable, resilient distributed systems.
- Designed and implemented SQL Server-based field management libraries, optimizing data persistence and retrieval with retry mechanisms for high availability.
- Built Azure Functions as isolated public endpoints for form submissions, enabling auto-scaling and system stability under high traffic without impacting system availability.
- Created background worker services subscribing to Azure Service Bus for asynchronous processing including submission validation and duplicate detection, demonstrating expertise in event-driven architecture.
- Implemented integration events for cross-microservice communication with the Tenant Service (meeting URLs, notifications), achieving loose coupling and strong data integrity across services.
- Managed Azure infrastructure provisioning with Terraform and automated deployments through CI/CD pipelines, enhancing environment consistency and deployment speed.

Cognizant | Software Developer (Thomson Reuters Financial)

January 2022 – August 2024

- Developed and maintained full-stack applications using C# (.NET), Angular, and SQL Server for Thomson Reuters financial systems, improving performance by 20% through query optimization and frontend enhancements.
- Wrote and optimized complex T-SQL queries, stored procedures, and database schemas for MS SQL Server and Oracle DB, significantly reducing API response times.
- Collaborated with frontend teams to build responsive web applications using Angular and JavaScript, ensuring cross-browser compatibility and consistent user experience.
- Implemented CI/CD pipelines with Jenkins and Docker, automating deployments and reducing manual errors by 30%, supporting containerized backend services.
- Integrated backend services with Azure DevOps pipelines and event-driven workflows to streamline continuous integration and delivery for financial applications.
- Strong experience in containerization of microservices architecture applications where I have containerized services of 3 development teams

PROJECT

- Developed a RAG-style chatbot using Semantic Kernel that dynamically retrieves real-time customer data via Open API-backed Customer API service before generating responses.
- Integrated Customer API Swagger/Open API as a Semantic Kernel plugin to enable dynamic function calling for fetching customer records on demand.
- Designed chat flow logic allowing the AI model to decide when to call external knowledge sources and combine retrieved data with AI-generated answers.
- Developed an AI-powered resume tailoring platform using LLMs, RAG, and embeddings to optimize resumes based on job descriptions and ATS requirements.
- Built the system using ASP.NET Core, Semantic Kernel, OpenAI/GitHub AI, and Open API retrieval to support responses.

CERTICATIONS

- Microsoft AZ-900: Azure Fundamentals
- Microsoft AZ-204: Azure Developer Associate
